

What types of scans are available?

Our practice offers imaging for men and women.

- **Breast Screening**
- **Full body scan** (sinus/allergy, dental, thyroid, upper and lower back, abdomen, carotid arteries, chest for cardiovascular system, thoracic and lumbar, arms, hands, legs, knees and feet)
- **Focused Area:** a particular area you are interested in having imaged

Follow these guidelines prior to your imaging appointment to ensure the best possible pictures are captured:

1. Do not use any lotions, powder or heavy make-up the day of the scan
2. Do not smoke for 2 hours before the scan
3. Avoid heavy meals 2 hours prior to the scan
4. Avoid sun exposure or tanning beds 2 hours prior to scan
5. No exercise or chiropractic adjustments 2 hours prior to scan
6. No metabolic stimulants (fat burners and/or diet pills) 2 days before the scan

**Don't delay in scheduling this screening. It could be life-saving!

Offering
THERMOGRAPHY

Digital Infrared Imaging

"A Picture of Your Health"

100% Safe

No Radiation

100% Painless

Self- Referred

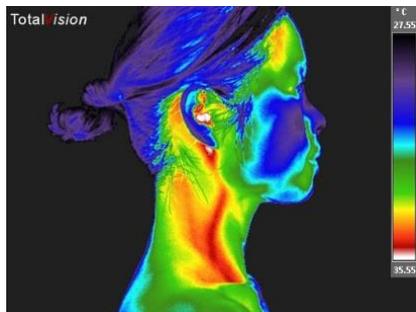

FDA Certified

What is thermography?

Thermography is a non-invasive, radiation FREE, pain FREE thermal scan of the body. This exclusive technology uses a clinical imaging procedure to create a map of the infrared patterns of the body. It is a valuable tool for alerting your healthcare provider to changes that can indicate early stage diseases.

Thermography is different from other types of diagnostic tools, such as MRI & X-Ray. It can help us see the function of your body. X-ray, MRI, and Ultrasound can detect anatomical changes and miss active inflammation or angiogenesis (increased blood supply as found in cancer). Thermography does not miss inflammation.

At Palmetto Thermal Imaging, LLC we use this technology as an early detection tool for: breast health, cardiovascular system, dental, thyroid health, compromised immune system, arthritis, digestive disorders, sinus and allergies, pulmonary health, and so much more! We are proud to be one of the very few practices in South Carolina providing you with this type of advanced imaging service.

Who can benefit from thermography?

All men and women of all ages can benefit from thermography. However, breast screening is especially important for women and having thermography is a great tool for early detection. We recommend every female 18 years of age and older have at least the breast scan performed once a year.

We know that active cancer cells can double in number every 90 days. Take a look at this cancer cell chart to see how EARLY detection can potentially save your life!

Active Cancer Cell Chart

90 days 2 cells

1 year 16 cells

***2 years 256 cells – Detected at this stage by Thermography**

3 years 4,896 cells

4 years 65,536 cells

5 years 1,048,576 cells (still undetectable)

6 years 16,777,216 cells

7 years 268,435,456 cells

***8 years 4,294,967,296 cells (doubled 32 times)
Normally detectable by mammogram
at this stage**

40 Doublings (approximate 10 years)
considered lethal

Is it Accurate?

Yes, as a routine screening tool, it has been shown to be 97% effective at detecting benign versus malignant breast abnormalities.

Is it Safe?

While a variety of studies have called into question the safety of cumulative exposures to radiation, this is NOT the case with thermography. Thermography emits nothing. It only takes an image and nothing touches you. It is quick and painless. This all makes thermography great for frequent screening with no danger!

Our goal at Palmetto Thermal Imaging, partnering with Integrative Healthcare Solutions, is to give you the best possible option for getting an early start monitoring your health.

Call us today 864-938-4888 to schedule this potential life-saving scan. We look forward to seeing you in the office!
